

NAGENDRA G

Software Engineer | Python • Django • Full Stack • Applied ML

Byndoor, India | +91 93533 82525 | nagendragudemane@gmail.com

PROFESSIONAL SUMMARY

Python-focused Software Engineer with hands-on experience across the SDLC — requirement analysis, design, development, testing, and deployment support. Strong in Django, REST APIs, and MySQL, comfortable across the full stack from database design to frontend integration, with an AI & ML background (B.E. in AIML) spanning applied ML systems and workflow automation. Foundation in OOP, DSA, and unit testing.

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML, CSS, SQL

Backend: Django, Django REST Framework, Flask, REST APIs, ORM, Authentication & Authorization

Frontend: React.js, Bootstrap, HTML/CSS, JavaScript

AI / ML: Machine Learning fundamentals, Data Preprocessing, Model Evaluation, OpenCV, NumPy, Pandas

Databases & Tools: MySQL, MongoDB, SQLite, Redis, Git, GitHub, AWS, Docker, pytest

Core Concepts: SDLC, OOP, Data Structures & Algorithms, CRUD, Query Optimization, Unit Testing

EXPERIENCE

Python Full Stack Intern — Dhee Coding Lab

March 2026 – Present

- Execute tasks across the SDLC — requirement analysis, design, development, testing, and deployment support — for Django web applications.
- Design and develop backend features in Python and Django; write REST APIs and integrate frontend components with backend services.
- Maintain database table structures, optimize MySQL queries, and write and maintain unit tests with pytest.

Client Project: PavanXDCL Web Application — Backend Developer (6-member team: 3 backend, 2 frontend, 1 lead)

- Developed backend functionality using Python and Django (views, APIs, ORM-based data handling) and worked on the frontend.
- Integrated frontend interfaces and forms with the Django backend, handling input validation and error cases.
- Tested complete workflows from UI to database, collaborating with frontend developers and the lead during debugging.

Backend Developer Intern — Suprmentr Pvt Ltd

January 2026 – February 2026

- Built and maintained REST APIs using Django REST Framework, including serializers and viewsets.
- Tested and refined API endpoints for reliable data handling; documented API behavior for backend and frontend teams.

PROJECTS

TB Disease Detection in Cattle

Python, Machine Learning, Flask, React.js, OpenCV

- Developed an ML-based system to assess tuberculosis risk in cattle from health and exposure parameters, applying rule-driven decision workflows to real-world data.
- Built workflows for data-based risk assessment and real-time monitoring for early disease identification.

Product Management System

Django, MySQL, HTML/CSS, JavaScript

- Built a database-driven CRUD application with Django Models/ORM, ModelForms validation, and authentication and authorization.

Stock Market Prediction System

Python, Machine Learning

- Built an ML model on historical stock data, with data preprocessing, feature selection, and model evaluation to improve prediction accuracy.

Electric Vehicle Recharge Station Finder

Web Development

- Developed a web app to locate nearby EV charging stations, with filtering and location-based search.

EDUCATION

B.E. in Artificial Intelligence & Machine Learning (AIML)

2022 – 2026
